

# QC100 Quick Clamp

## **SIMPLE TO USE**

Just squeeze the bottom together to insert a steel blade

## **CLAMP SYSTEM**

Spring tension alone will securely hold the blade, but thumb screw exists as well for added security

## **DUAL PURPOSE TOOL**

Can be used for both single blade sharpening and contouring of two blades at once (stacked configuration)

## **OPERATOR PROTECTION**

The clamp features a 9ft. radius that provides a safe path of travel during the deburring process

## **PROVIDES 3rd HAND**

Simply set the clamp on its back, then with one hand squeeze the clamp to install 2 blades and use your other hand to align them in the QC100

## **WHY BLADEMASTER**

- Our clamp uses a single thumb screw versus more cumbersome 2 screw designs
- Steel construction provides needed strength and gives a better feel in the operator's hand (or skate holder)
- Designed with the operator in mind to ensure safe, easy operation during sharpening, contouring, and deburring
